### **Bootstrap Components:**

- Navbar
- Dropdowns
- List group
- Jumbotron

### **UI/UX Improvements:**

One of changes I made was instead of having two tables, I had a paginated view where you can select each learning outcome, and it would display the description of the outcome, along with the related evaluation metrics. There is also an “Overview” section, which lets you just view every evaluation metric. I believe this is an improvement because now there aren’t two tables you have to constantly cross-reference, and you can easily select which learning outcome to view, and what learning metrics are associated to it without having one gigantic table like originally proposed. This utilized list groups and jumbotron components.
